Midterm Proposal

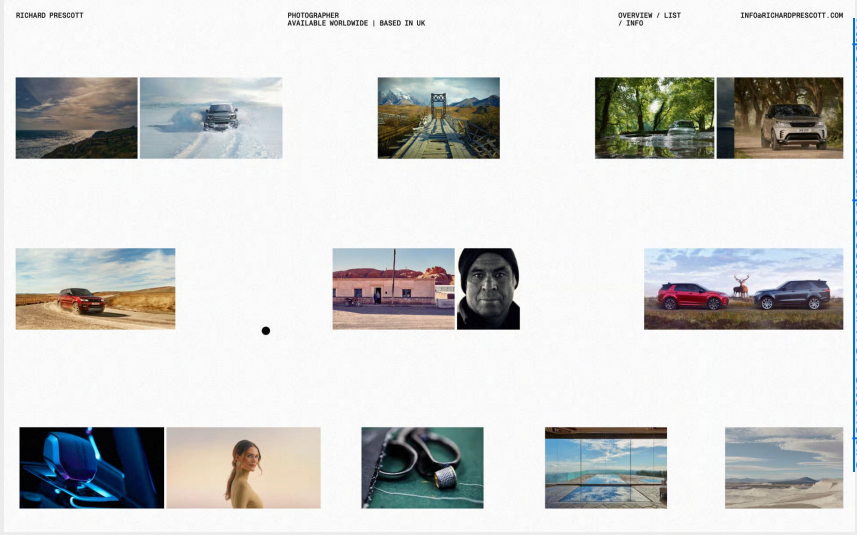

October 6, 2026

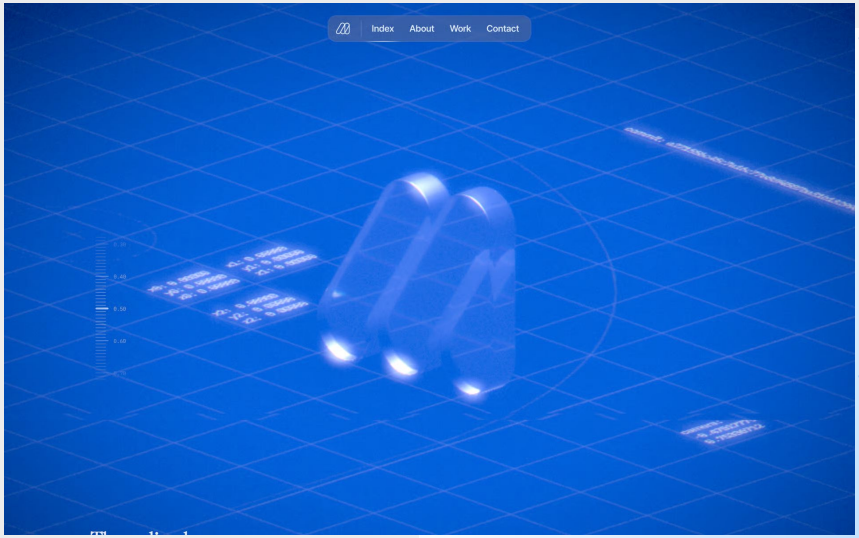

Sia Kim

Concept/ Theme

For my website, I want to create a portfolio. My site will give people a better understanding of my interests, creative process, skills, and the different types of projects I create.
The main audience will be potential employers, recruiters, internship coordinators, and other professionals who may be interested in hiring or working with me. My portfolio will allow them to quickly look through my work and get a better understanding of me outside of a resume.

Concept/Skill

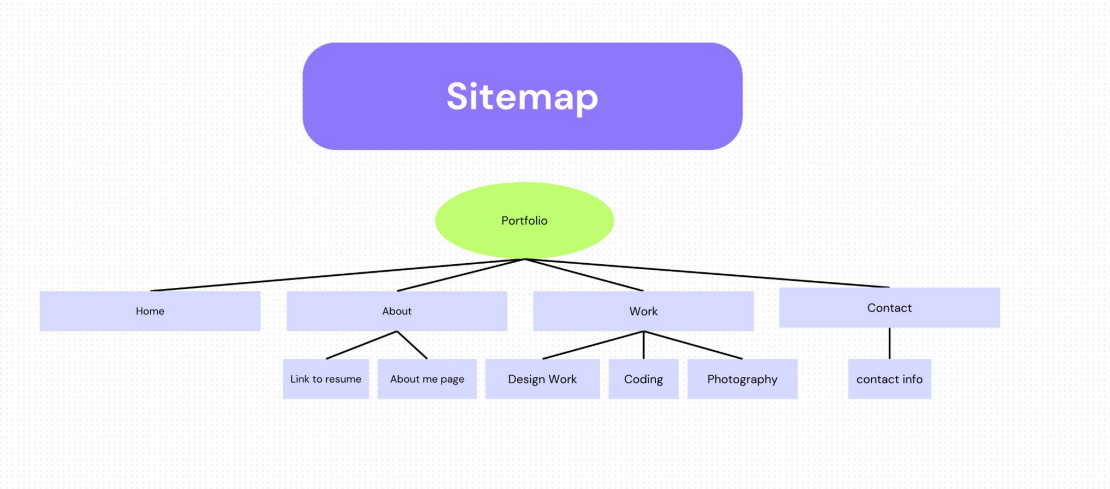

From Class

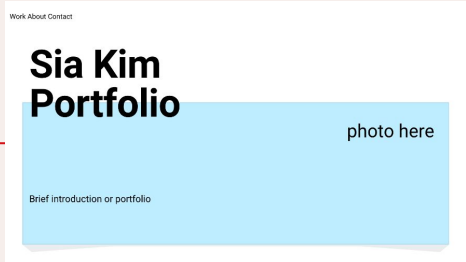

I will use the box model and flexbox to organize and arrange the different projects and images for my website. I also want to use positioning to layer text, images, and small decorative elements. I will also have a navigation bar that connects to different pages.

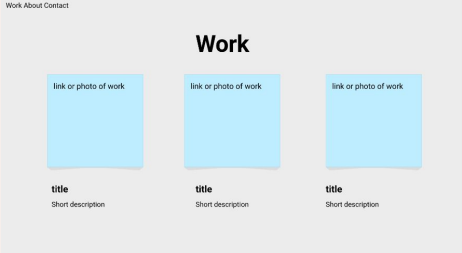

To Learn

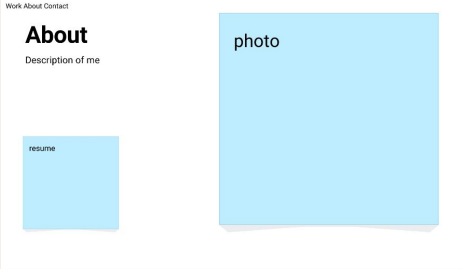

I want to learn how to layer different elements, such as images, text, shapes, and graphics, to make my portfolio more visually interesting and give it a scrapbook kind of feel instead of a grid layout. I also want to learn how to embed different types of media directly into my website.
